

Catch the Blues Before They Cost You

A Data-Driven First-Visit Protocol to Predict and Prevent Emergency Room Visits

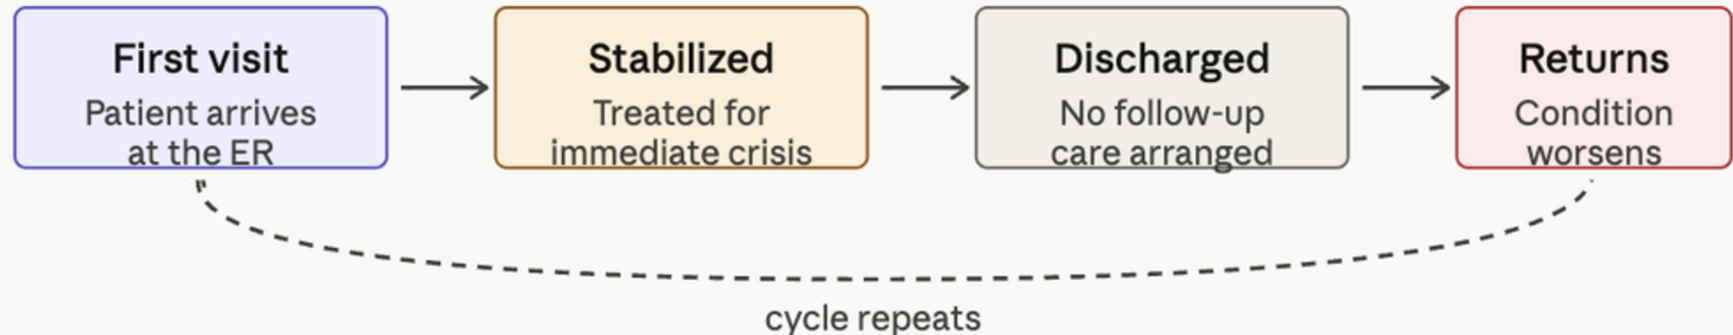

Team NSDC Michelle Yoon, Madeleine Curran, Mehek Bajaj, Nina Huang, Anika Lala

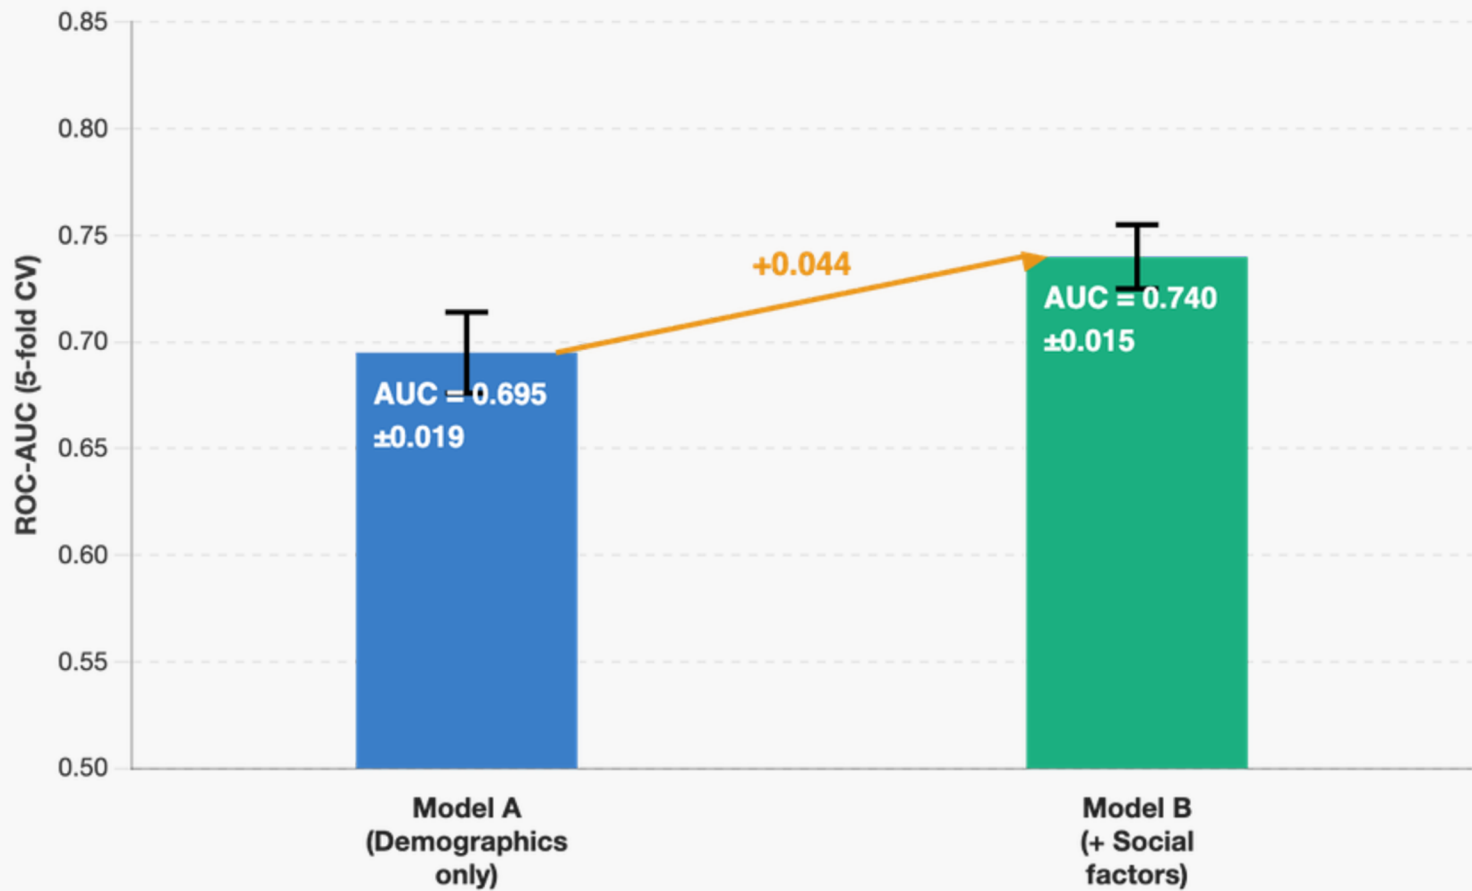

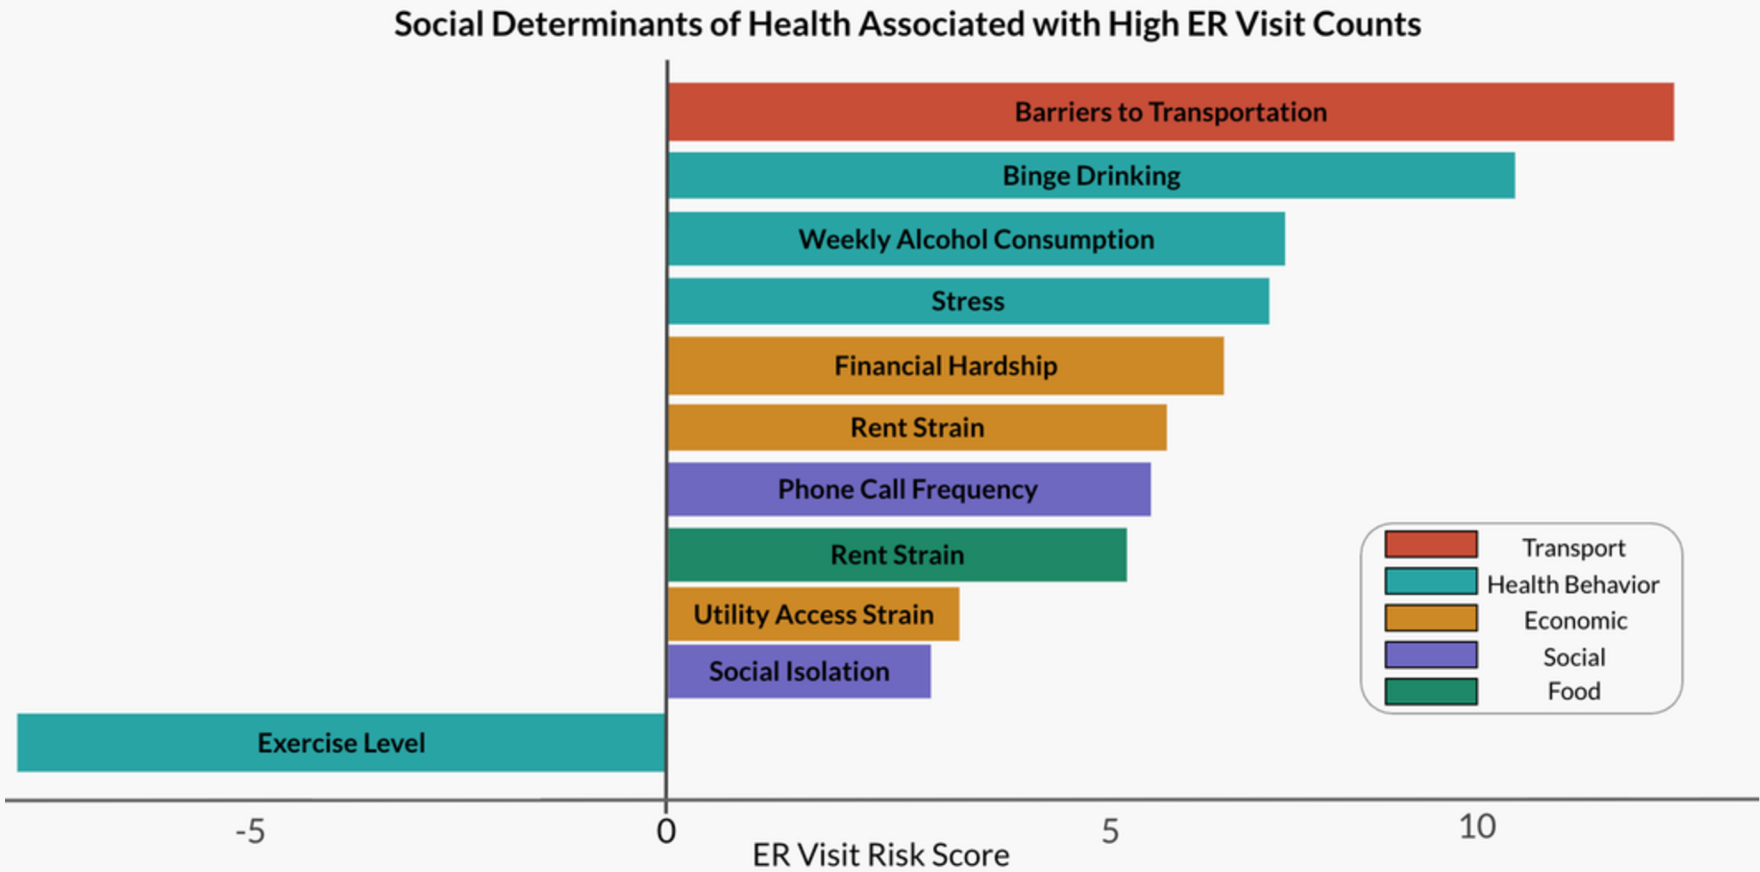

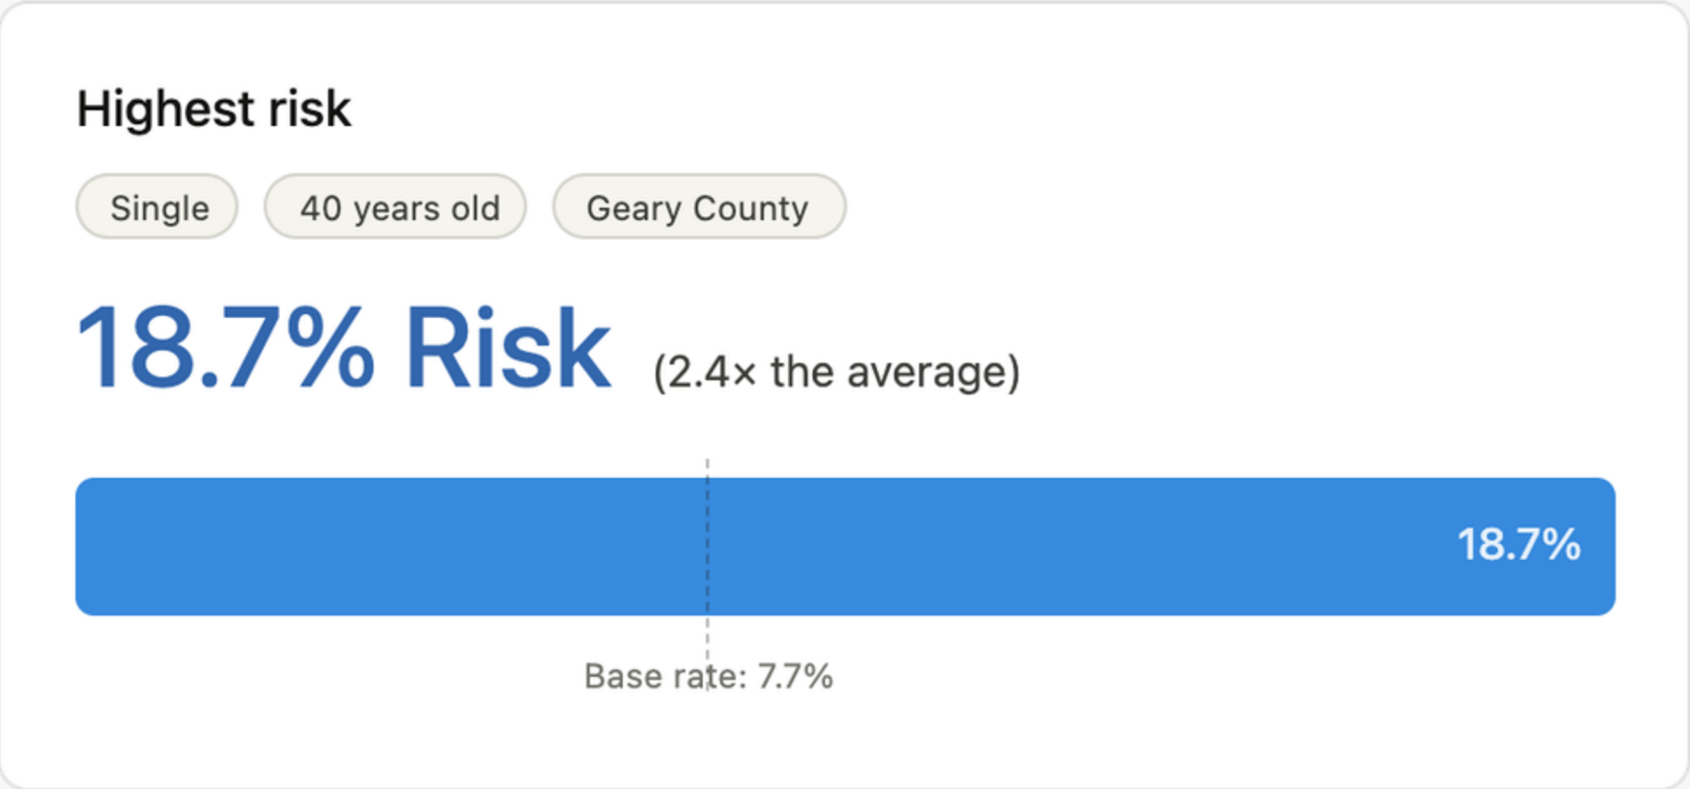

How can we reduce ER visits for patients with depression?

Depression patients are using the ER as their primary care
This is costly, ineffective, and preventable

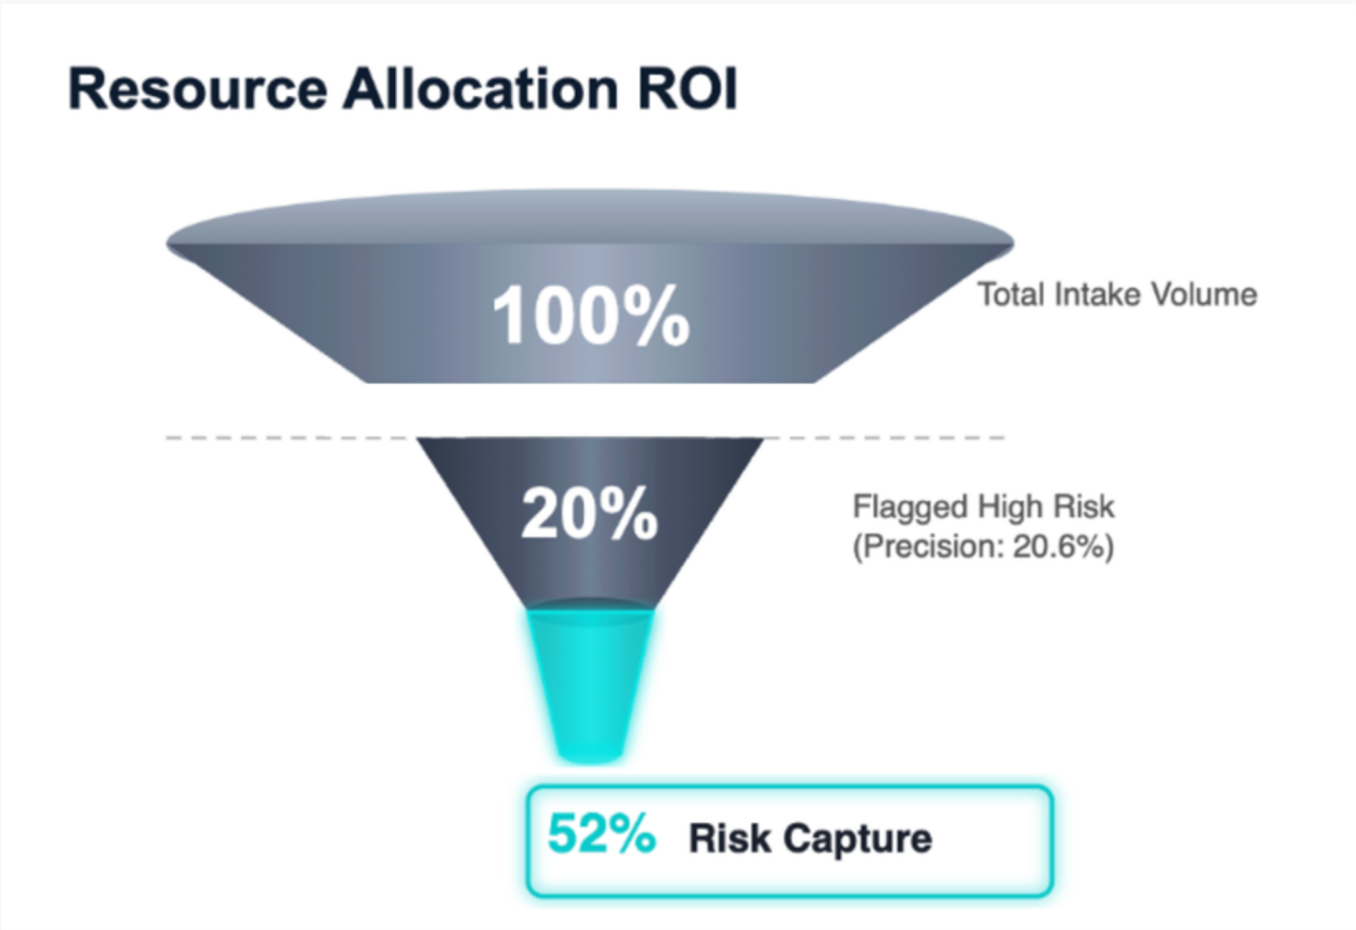

The cycle

Demographic Baselines

Deploying the First-Visit Predictive Intake Tool

Maximum ROI

By standardizing the intake screening, SVH can identify and intercept over 52% of all future ER visits by intervening on just 20% of patients.
